In general:
- ☑ ~~Need a way to figure out the month every time the person accesses the program~~
  - ☑ ~~Look into python time/python datetime~~
  - ☑ ~~We will use this to show on the main screen "These are your expenses for (current month)"~~
  - ☑ ~~Will also have to alter the database call and add a filter of what month to choose from~~
    - ☑ ~~To know the month, it is stored as a string in MMDDYYYY format, so we will just need to match MMYYYY because that will tell us the exact month that all the purchase were done~~
- ☐ Fill the database with more purchases
  - ☐ Right now it is only full with September, I think filling it with October and partial November will suffice
- ☐ Somewhere we need to add a budget helper tool
  - ☐ This will be effective when budgets aren't being used properly
    - ☐ An idea right now is if one category goes over, we see another category that is under utilized and then propose a new budget which would take away from the under utilized category and give the portion to the category that has gone past the threshold

Main Page:
- ☑ ~~Add Jihoon's graphs of spending~~ ==~~to the right side~~==
- ☐ If any of the budgets have been surpassed, we need to send some type of alert/pop-up
  - ☐ I think Jihoon worked on something like this in Sprint 1
- ☑ ~~Edit transactions button to be longer or something~~
- ☑ ~~Add button to go to subscription page~~
- ☐ Add checklist that Jihoon made to ask what people are subscribed to

Edit Budget:
- ☑ ~~Need to actually send the information to the database from the GUI when done is pressed~~
- ☑ ~~Need to stretch out the grid~~

Enter Transactions:
- ☑ ~~Need to actually send the information to the database from the GUI when done is pressed~~
- ☑ ~~Need to stretch out the grid~~

See Transactions: (Kind of optional)
- Option A:
  - Only have a graph from the previous month
  - Have the option to go back and forth through previous months (only one month on a screen at a time)
- Option B:
  - Same as option A, but also have a list view on the side where you can literally see all of your transactions from the specific month

Subscriptions Page:(Azam feel free to change anything)
- Graphs of subscriptions?
- Do we want to use this information to indicate anything?
